JAC

PROJECT NO SHORTCUTS

100,000KM OF TESTING

No Shortcuts is more than a statement. It's a standard.

Some things are too important for shortcuts. That's why Hunter spent more than 100,000km proving itself on Australian roads before it ever reached a showroom. Through extreme heat, heavy towing, long-distance highway driving, rough regional roads, soft sand and unsealed tracks, every kilometre was there for one reason: to make Hunter better suited to Australian conditions. The local validation program was overseen by independent Australian engineers.

Not every ute is locally tuned for Australian conditions. Hunter is.

As a driver, it means you can drive with confidence, knowing Hunter has already proven itself across the kinds of roads, weather and workloads Australians experience every day.

TUNED FOR AUSTRALIA

A global, generic tune was never going to cut it. Not here.

Hunter's local tuning was led by Michael Barber from Multimatic, the engineering mind behind some of Australia's most respected vehicle dynamics programs. The brief was simple: make Hunter feel like it belongs in Australia. The result is a ute engineered specifically for Australian roads, conditions, payloads and expectations.

Every Hunter delivered to customers from day one includes all of Michael Barber's tuning recommendations. No shortcuts.

"The level of testing that JAC is undertaking is testament to their interest in developing a vehicle that is suited to the Australian conditions, and I think that's quite a big commitment." – **Michael Barber**
